

Playtesting:

Doomsday:

Underground Uprise

Team: Tri-Hard

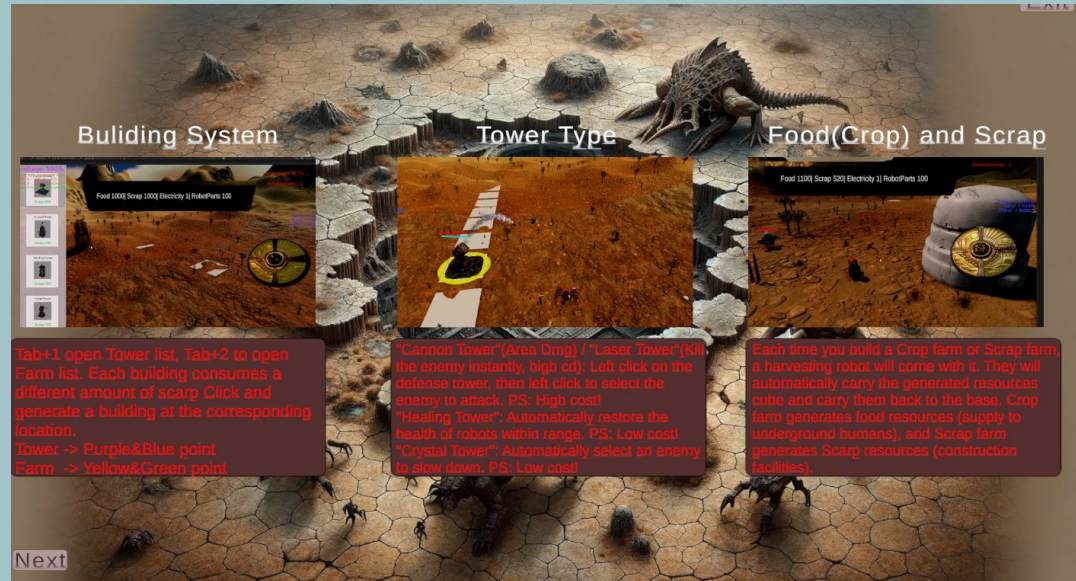

- Matija Jajcinovic
- Haorui Tan
- Hongbo Chen

Our Goals and Setting

- 8 Playtesters
 - Ask critical questions about what we think could cause problems
 - some open questions that could be freely answered
-

Changes for Playtesting from Alpha

- Added Tutorial
- Menu
- Music
- Bug fixes

Do you like the gameplay of the underground basement?

8 Antworten

Results

Do you think the building placement system of the underground basement is easy to use?

8 Antworten

Results

Do the status bars on people's heads confuse you and you don't know what's going on during gaming?

8 Antworten

Results

Do you think the weapon & robot production mechanism has a positive or negative influence on your game experience?

8 Antworten

Results

Is the game mechanism of the underground basement too complex or less interesting for your game experience?

7 Antworten

Results

Does the underground gameplay give you some new experience about the RTS games?
Could you please share your experience with us?

8 Antworten

Yeah, but not a lot

first time play rts

I have never played such a complicated rts before

a

No, nothing new

- Very confusing UI (not explained anywhere) but after intruction it was easy to understand

Very confusing game, camera got stuck

no

Does the surface building consume too much Scrap? (Taking too long to build a surface building)

7 Antworten

Results

Does it take long to build a combat robot?

7 Antworten

Results

Please provide a modification suggestion for the surface part 😊

5 Antworten

I hope that im able to select more robot in the same time

Increase camera movement speed

Players can destroy defense towers themselves

artelery tower is too strong, maybe some more automatic towers?

Robots could not be selected by dragging, box

What would I improve on the graphics:

7 Antworten

Game is lagging!!!!!!!!!!!!!!!!!!!!

Not bright enough

no

Graphic is good enough for a game made by three programmers

Some weird grain

Too dark

its perfert

Results

Visual clarity of units and objects

What I liked most about the game is:

7 Antworten

Baby borned without sex, i seggest there should be some animation about it

Complex systems can increase player experience

art is good

Robot part

- cool art style, interesting concept

Okay graphics

model

Results

What I liked the least:

7 Antworten

UNDERGROUND has too much Problem

Underground character modeling is rudimentary

Not easy to control

basement building system

bugs, robots going through buildings

Buggy, too loud sounds, few sound effects, confusing gameplay, no goal explained

no

Results

I would pay X Euros for a final Version of this game (0 for would not buy):

Problems of the Feedback

Don't know where to produce Part

misleading progress bar

operation logic is too complex

Lack player motivation strategy

No ESC exit function

Production not easily observable

lacks visual feedback

Is there an elevator ?

feel a swarm-like sensation, but not clear enough

Improvements based on the feedbacks

Before :

Have to click the building and check them one by one

Have to refer many information

The building is just a static object

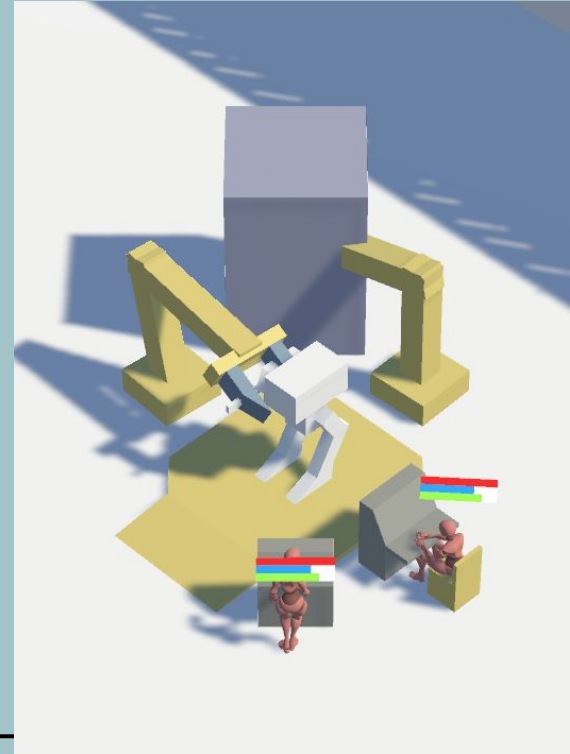

Improvements based on the feedbacks

After: Bone Bonding & inverse kinematic

Can get visual feedbacks from the animation

Can see:

- what is being produced
- how much progress is made
- how fast is the production speed
- whether it's suspended

Improvements based on the feedbacks

Before:

Although some automatic method, the players still feel stressful

cannot get the joyful feeling that they are the rulers of the basement

Improvements based on the feedbacks

After:

Introduced factories recruit logic

Players only consider high level operations

Joy comes from being a controller
not a babysitter

What the feeling we what to convey?

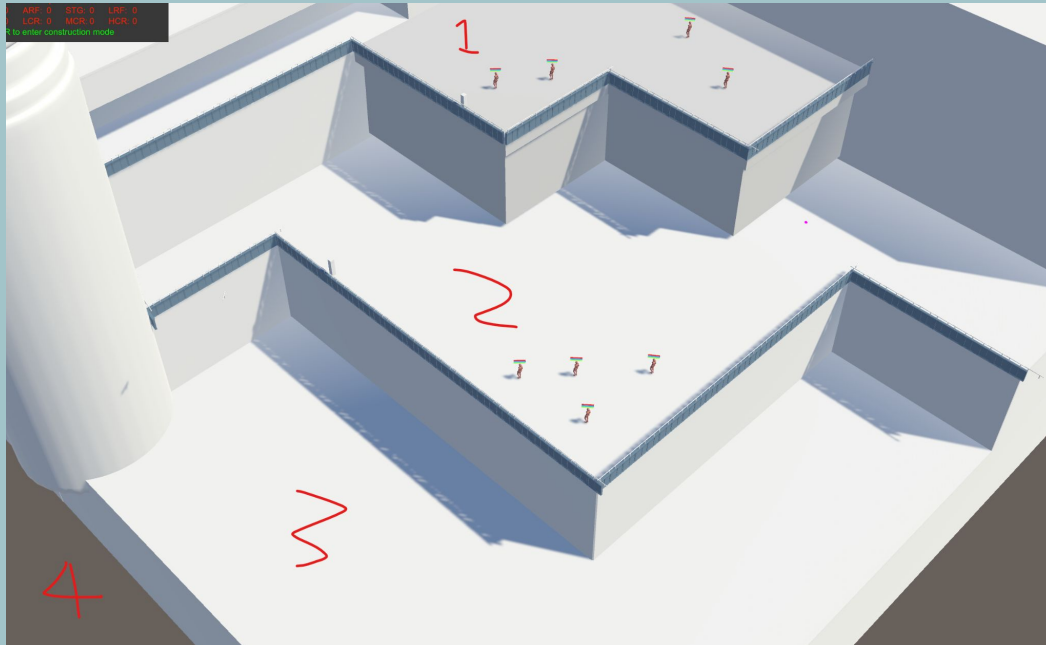

Player should enjoy the feeling or become a controller

We know there are lots going on, but we don't have to worry about details

just pay attention to interesting things

Good suggestions in the feedback

As the game progresses, new areas can be opened up for players as rewards

Practical Problems we have encountered

- our pool of playtesters was low (but a diverse group of playtesters).
 - bad performance
 - Next time export the build for Linux and AppleOS to make it more accessible
-

What we have learned

- do not make the tutorial skippable or optional => players won't use it
 - using text is a bad idea, most won't read it
 - icons and pictures have stronger expression than words
 - Appropriate rewards is necessary for players to keep playing the game
 - not everybody has a RTX4090 and RTX 4080 GPU => bad performance on average systems
 - our game needs improvements but most of them are easily fixable
 - play testers were not amazed by our game but recognized the effort in the graphics and concept
 - people with little experience have a hard time playing the game => we are relying a lot on implicated standard RTS that just lacks if you are new to the genre
-

Next Steps till Final Release

- fix all issues pointed out by play testers; they are easily fixable
- add some missing Layer 4 features
- bug fixes
