| Exploring generative models for OCT Image generation | 4:40-5:00 |
| GeNoMe: Generating Anomalies in Medical Imaging | 5:00-5:20 |
| SceneGenie: Scene Graph to Image via CLIP Embeddings and Diffusion Model-based Generation | 5:20-5:40 |
| Structured report generation | 5:40-6:00 |

**Presentation Guidelines:** (percentages correspond to the grading scheme)
- Project Outline
    - Introduction, motivation and problem statement (20%)
    - Background and related works (10%)
    - Methodology (10%)
- Project Progress and Outlook
    - Use Gantt Charts to present Work-package and Milestones
    - Current state: present preliminary results, finished milestones, and work packages. (20%)
    - Upcoming tasks, milestones, work packages (20%)
- Q&A session (10%)
- Quality of presentation and slides (10%)

**Remarks:**
- Mind your time
    - We will strictly enforce speaking time limits (15 mins + 5 mins Q&A)
    - Don't rush it, though. Convey your message clearly.
- Participate in the class
    - It is highly recommended to participate in the class by asking questions. This would help the speakers to identify their challenges.

**Tutor Guidelines:**
- You are kindly asked to be there for any further needed discussion.
