At any time, please feel free to ask for your official quote/offer for your study.

How do we calculate our prices?

All prices cover usage-dependent costs without general administrative services for staff and depreciation of devices.

The costs consist of those components:

1. Provision Costs

Provision Costs include all costs which incur by handing-over devices to be ready-to-use for research projects. This includes technical supervision, introduction and support.

2. Calibration

Costs for technical calibration before the device is used for a project.

3. Consumables

All Costs for consumable materials.
